Building an Anonymous FTP Scanner using Python

Aim:

To develop a python program using ftplib to check whether an authorized FTP server allows anonymous access.

Requirements:

- Windows / Linux computer
- Python 3.x
- Built-in ftplib module
- An authorized FTP server
- No separate installation of ftplib is required

Check Python Installation:

Open command prompt or Terminal and run:

```
python --version
```

If it does not work on windows, use:

```
py --version
```

Create the Python File:

Create a file named:

anonymous_ftp_scanner.py

Import the FTPLIB module:

```
from ftplib import FTP
from ftplib import all_errors
```

Write the Scanner Program:

The program connects to the FTP server, checks anonymous login access, and displays available files

```
from ftplib import FTP, all errors.
def anonymous_ftp_scan(host, port=21):
    print("="*50)
    print("ANONYMOUS FTP SCANNER")
    print("="*50)
    print(f"Target: {host}")
    print(f"port: {port}")
    try:
        ftp = FTP()
        print("[*] connecting to FTP server.")
        ftp.connect(host, port, timeout=10)
        print("[*] FTP server is reachable")
        ftp.login("anonymous", "anonymous@example.com")
        print("[+] Anonymous login SUCCESSFUL")
        print("[+] checking accessible directory.")
        files = ftp.nlst()
        if files:
            print("[+] Directory listing is available:")
            for item in files:
                print("-", item)
        else:
            print("[-] Directory is empty or unavailable.")
        ftp.quit()
    except all errors as e:
        print("[-] Anonymous login failed or FTP
                connection failed.")
        print("[-] Error:", e)
    try:
        ftp.close()
    except:
        pass
target = input("Enter an authorized FTP server address:")
anonymous_ftp_scan(target)
```

Run the Program:

Open command prompt / Terminal in the program folder and run:

py anonymous_ftp_scanner.py

Enter the address of an authorized FTP when prompted

For a local FTP server, use:

127.0.0.1

Result:

The Anonymous FTP scanner was successfully developed using Python to check FTP connectivity and anonymous access.
